## Education and Training in Advance Care Planning (ACP)

# End-of-life Care Capacity Building Program – Training To Healthcare Professionals to Facilitate ACP

<u>Faye Chan</u>, Jean Woo, Connie Tong, Derek Lai, Jenny Chan Jockey Club Institute of Ageing The Chinese University of Hong Kong

Background: Advance care planning (ACP) has the potential to address patients' end-of-life care needs. ACP is relatively new to the public in Hong Kong, but older adults and patients with progressive and life-limiting illnesses are beginning to embrace the concept. As such, frontline healthcare professionals need to have a good understanding of the concepts as well as the skills to initiate such conversation. The end-of-life care (EOLC) capacitybuilding program of the Institute of Ageing, The Chinese University of Hong Kong, is part of the Jockey Club End-of-life Community Care Project since 2015. It has been training healthcare professionals of the public hospitals in the New Territories East Cluster. And since 2022, the training sessions are extended to the Hong Kong West and East Clusters. Although the Hospital Authority has guidelines for clinicians in promoting ACP to the appropriate patients, there are barriers. Through the EOLC program, training sessions relating to ACP have been implemented to enhance the clinician's knowledge, skills and attitude. The participants' feedback on the ACP training can be used to enhance the quality of future training.

**Methods**: Data of the evaluation feedback of the participants from 2019-2021 in ACP are analyzed and summarized here.

**Results**: The results are categorized in terms of the quality of the training, knowledge, skills and attitude in ACP, and application to clinical settings.

Conclusion: The overall quality and practicality of the training were well received. There is an enhancement in both knowledge and skills in addressing the training needs of healthcare professionals in ACP. The enhancing attitude towards ACP is also observed.

#### Quantitative evaluation results of the training to doctors

| Domain       | Item   | N   | м    | SD   |
|--------------|--|-----|------|------|
| Knowledge    | increase knowledge of EQL care   | 191 | 3.84 | 0.73 |
|              | clarify misconceptions about EQL care  | 108 | 4.12 | 0.64 |
|              | raise awareness of EoL care  | 107 | 4.25 | 0.53 |
|              | improve skills in communicating with<br>EQL patients and their family<br>members     | 108 | 4.16 | 0.57 |
| Attitude     | improve confidence in<br>communicating with FQL patients and<br>their family members | 190 | 3.76 | 0.75 |
|              | increase motivation to initiate Fol<br>conversations                                 | 107 | 4.04 | 0.66 |
| Behaviour    | initiate more EQL conversations  | 188 | 3.65 | 0.80 |
| Satisfaction | the training is relevant   | 191 | 3.85 | 0.79 |
|              | the training is important  | 191 | 3.91 | 0.79 |
|              | the training is useful   | 191 | 3.92 | 0.78 |
|              | the quality of the training is good  | 187 | 4.12 | 0.65 |

Note. Respondents rated the extent to which they agreed with each statement in the questionnaire (1 = strongly Disagree, 5 = Strongly Agree). The items as shown above captured the psychological constructs that these statements <a href="mailto:measured">measured</a>, but were no necessarily the actual wording displayed to the respondents. All results were aggregated whenever applicable, across all training sessions.

#### Quantitative evaluation results of the training to nurses

|              |   |       | _    |      |
|--------------|---|-------|------|------|
| Domain       | Item  | N     | м    | SD   |
| Knowledge    | increase knowledge of EoL care  | 2,073 | 4.09 | 0.57 |
|              | raise awareness of <u>EoL</u> care  | 2,054 | 4.12 | 0.57 |
|              | improve skills in communicating with<br><u>EOL</u> patients and their family<br>members | 2,005 | 4.08 | 0.57 |
| Attitude     | improve confidence in communicating with EOL patients and their family members          | 2,025 | 4.06 | 0.56 |
|              | increase motivation to initiate EQL<br>conversations                                    | 2,007 | 4.00 | 0.60 |
| Behaviour    | initiate more <u>EoL</u> conversations  | 2,007 | 4.00 | 0.59 |
| Satisfaction | the training is relevant  | 2,088 | 4.09 | 0.61 |
|              | the training is important   | 2,089 | 4.09 | 0.59 |
|              | the training is useful  | 2,088 | 4.07 | 0.61 |
|              | the quality of the training is good   | 2,082 | 4.12 | 0.55 |

Note. Respondents rated the extent to which they agreed with each statement in the questionnaire (1 = Strongly Disagree, 5 = Strongly Agree). The Items as shown above captured the psychological constructs as measured by these statements, but were not necessarily the actual wording displayed to the respondents. All results were aggregated

## Quantitative evaluation results of training to allied healthcare professionals

| Domain       | Item  | N   | м    | SD   |
|--------------|---|-----|------|------|
| Knowledge    | increase knowledge of EoL care  | 249 | 3.55 | 0.68 |
|              | raise awareness of EoL care   | 97  | 4.10 | 0.53 |
|              | improve skills in communicating with<br><u>EoL</u> patients and their family<br>members | 39  | 3.95 | 0.56 |
| Attitude     | improve confidence in communicating with EQL patients and their family members          | 190 | 3.32 | 0.62 |
|              | increase motivation to initiate <u>EoL</u><br>conversations                             | 39  | 3.87 | 0.61 |
| Behaviour    | initiate more <u>EoL</u> conversations  | 162 | 3.09 | 0.77 |
| Satisfaction | the training is relevant  | 266 | 3.59 | 0.76 |
|              | the training is important   | 266 | 3.56 | 0.73 |
|              | the training is useful  | 263 | 3.53 | 0.75 |
|              | the quality of the training is good   | 263 | 4.06 | 0.78 |

Note. Respondents rated the extent to which they agreed with each statement in the questionnaire (1 = Strongly Nagree). The items as shown above captured the psychological constructs as measured by these <u>statements</u>, but were not necessarily the actual wording displayed to the respondents. All results were aggregated, whenever applicable, across all training sessions.
