

Project Title: Our Everyday. Our Borders. "A study of universal accessibility in our built environment in Hong Kong

Abstract

In creating Hong Kong as a walkable city for the elders, a project team of doctors, architects and urban planners, elders and students are encouraged to go out and explore the “treasures” in the city, and to voice out their views on universal accessibility of the built environment. The synergy between the professional team and elders are mutually beneficial with the potential of driving positive spiral effect towards the society as a whole. The project provides a proactive way to drive our city towards the “Sustainable Development Goals” (SDGs), making cities and human settlements inclusive, safe, resilient and sustainable, and safeguarding elders in Hong Kong their right to well-being.
